

Example project- Lead generation AI agent

<https://www.youtube.com/watch?v=0zGkj-U0aNk&t=719s>

1. n8n :

No code platform for automating workflow and building AI agent.

Goal: Scrape restaurant leads and saves them to google sheet.

Description: Creating a agent which scrape all the les for us by applying some filters and keep the relevant information like name, location, contact no, and stored that information into the google spread sheet.

Every Automation contains 3 parts

1. Triggers
2. Filter
3. Action

Tools I used while building this pipeline

1. **Used trigger** : To run the workflow
2. **Zomato website URL** : To find all the restaurant of Nagpur.
3. **Jina.AI** : Helps us to convert all the URLs into the format that is readable to LLM mode
4. **SSL**: used SSL property so that we can scrape data without any difficulty.
5. **Information Extractor** : This node help to retrieve the relevant and important feeds for ourself
6. **Open AI chat model**(offer free credits by n8n): Open AI help us to give prompt to extract the specific info.
7. **Google sheet (append row up)** : Use to collect the data into the spread sheet automatically
